

# California Wildfires Have Changed, Together We Must Adapt.

Now is the time to act to prevent wildfires. In 2019, CAL FIRE has already responded to more than 470 wildfires that have burned over 1,180 acres. Californian's need to accept fire as part of our natural landscape, understand the fire risk, and take action before a wildfire starts. We encourage residents to help safeguard their homes by using fire-safe construction materials, and to look for points of entry where embers could intrude creating a defensible space by clearing vegetation 100-feet of more away from your home, and using fire resistant landscaping to help stop the spread of wildfire. Taking the initiative to prepare your home & your community will be key in preventing unfathomable damage that wildfires can cause. To learn how to create defensible space around your home & more, visit [www.ReadyForWildfire.org](http://www.ReadyForWildfire.org).
